Cisco Catalyst IW9167 Heavy Duty Series

Contents

The Cisco® Catalyst® IW9167 Series provides reliable wireless connectivity for mission-critical applications in a state-of-the art platform. It can operate in Wi-Fi 6, Workgroup Bridge (WGB), or Cisco Ultra-Reliable Wireless Backhaul (Cisco URWB) mode.

Product overview

The Catalyst IW9167 Series addresses the growing need to provide reliable wireless connectivity for mission-critical applications as organizations automate processes and operations. It comes with three 4x4 radios in a heavy-duty design that is IP67 rated and packed with advanced features.

The Catalyst IW9167 Series is designed to take advantage of the 6 GHz band expansion to deliver a network that is more reliable and secure, with higher throughput, more capacity, and less device interference. The 6 GHz band support will be available with a future software upgrade and is subject to approvals and regulations by each countries' regulatory agencies for the use of the 6 GHz spectrum for outdoor standard power devices. Please refer to the Wi-Fi 6E white paper for more details on 6 GHz.

Cisco Catalyst IW9167E Heavy Duty Access Point

The Catalyst IW9167E is designed with external antenna ports and provides flexibility to choose the right antenna based on the use case. It offers unmatched flexibility, as it can operate in one of three different modes: Wi-Fi 6, WGB, or Cisco URWB:

- All the benefits of Wi-Fi 6 in industrial or outdoor spaces: Higher density, higher throughput, more channels, power efficiency, and improved security.
- WGB mode provides an arsenal of features and capabilities to help ensure continuous connectivity for static and mobile industrial applications in a Wi-Fi deployment.
- Cisco URWB provides ultra-reliable wireless connectivity for moving assets or to extend the network where running fiber isn't feasible or is too costly. It provides up to 99.995% availability, <10 ms latency, and zero packet loss with seamless handoffs. Cisco URWB is a proven technology that has been used by many customers, operates on unlicensed spectrum, deploys like Wi-Fi, and gives you full control of your network.

Figure 1.
Catalyst IW9167E Heavy Duty Access Point

Cisco Catalyst IW9167I Heavy Duty Access Point

The Catalyst IW9167I is designed to make wireless deployments simple in outdoor and industrial environments. It is built with a cast-aluminum case that can handle water, dust, and extreme temperatures. It comes with a built-in antenna that enables high-throughput connectivity for high-density Wi-Fi clients.

The IW9167I supports Wi-Fi 6, and it comes with 6-GHz hardware support. That way organizations can deploy Wi-Fi 6E and get up to 1.2 GHz more spectrum to boost capacity and mitigate interference.

Figure 2.
Catalyst IW9167I Heavy Duty Access Point

Secure infrastructure

Trustworthy systems built with Cisco Trust Anchor technologies provide a highly secure foundation for Cisco products. With the Cisco Catalyst IW9167 Series, these technologies enable assurance of hardware and software authenticity for supply chain trust and strong defense against man-in-the-middle attacks that compromise software and firmware. Trust Anchor capabilities include:

- Image signing
- Secure Boot
- Cisco Trust Anchor module

Features and benefits

Table 1. Catalyst IW9167 Series features and benefits

Feature	Benefit
Wi-Fi 6 (802.11ax)/Wi-Fi 6E-ready	The IEEE 802.11ax standard, also known as High-Efficiency Wireless or Wi-Fi 6, builds on 802.11ac. IW9167 series can support 4x4 MIMO and up to four spatial streams. Wi-Fi 6E is Wi-Fi 6 “extended” into the 6 GHz frequency band, allowing the use of additional channels. IW9167 is Wi-Fi 6E ready, subject to approvals and regulations for the use of the 6 GHz spectrum by each country’s regulatory agencies.
Flexible multitechnology support	Two different technologies (Wi-Fi and Cisco URWB) provide flexibility to choose a mode based on the use case. Ability to swap images in the field helps you select Wi-Fi, WGB, or Cisco URWB operating modes without changing the hardware.

Feature	Benefit	
Tri-radio architecture	IW9167E • 2.4 GHz 4x4 radio: 20-MHz channels • 5 GHz 4x4 radio: 20, 40, 80 MHz channels • 5/6* GHz 4x4 radio: 20, 40, 80, and 160 MHz channels	IW9167I • 2.4 GHz 4x4 radio: 20-MHz channels • 5 GHz 4x4 radio: 20, 40, 80 MHz channels • 6* GHz 4x4 radio: 20, 40, 80, and 160 MHz channels
Multigigabit Ethernet	Dual Multigigabit Ethernet supports speeds up to 5 Gbps.	
Smart AP†¥	Smart AP causes the access point to change its power consumption to reflect its current client load. An access point will typically operate on the radios provided to it regardless of how many clients are connected. With Smart AP, if the number of clients is small enough, the access point will automatically reduce the radio stream count, saving power.	
Band steering¥†	Enhanced to help clients that are 6 GHz capable to leave the 5 GHz radio and connect to the 6 GHz one. Wi-Fi 6E clients are automatically directed to connect to the 6 GHz radio to take advantage of the benefits that the radio offers and free up the 2.4- and 5 GHz radios for legacy clients. IW9167 is Wi-Fi 6E ready, subject to approvals and regulations for the use of the 6 GHz spectrum by each countries' regulatory agencies	
Uplink/downlink OFDMA¥	Orthogonal Frequency-Division Multiple Access (OFDMA)-based scheduling splits the bandwidth into smaller frequency allocations called Resource Units (RUs), which can be assigned to individual clients in both the downlink and uplink directions to reduce overhead and latency.	
Uplink/downlink MU-MIMO technology¥	Supporting four spatial streams, Multiuser Multiple Input, Multiple Output (MU-MIMO) enables access points to split spatial streams between client devices to maximize throughput.	
BSS coloring¥	Spatial reuse (also known as Basic Service Set [BSS] coloring) allows the access points and their clients to differentiate between BSSs, thus permitting more simultaneous transmissions.	
Target Wake Time¥	Target Wake Time (TWT) allows the client to stay asleep and to wake up only at prescheduled (target) times to exchange data with the access point. This offers significant energy savings for battery-operated devices, up to three to four times the savings achieved by 802.11n and 802.11ac.	
Intelligent Capture¥	Intelligent Capture probes the network and provides Cisco DNA Center with deep analysis. The software can track more than 240 anomalies and instantaneously review all packets on demand, emulating the onsite network administrator. Intelligent Capture allows for more informed decisions on your wireless networks.	
Bluetooth 5†	The integrated Bluetooth Low Energy (BLE) 5 radio enables location-based use cases such as asset tracking, wayfinding, and analytics.	
Scanning radio†	Dedicated radio for monitoring air space to perform advanced RF spectrum analysis and deliver features such as Cisco CleanAir®, Wireless Intrusion Prevention System (wIPS), etc.	
GNSS	A built-in GNSS (Global Navigation Satellite System) receiver provides coordinates to track the location of the access point.	
M12 adapter	M12 adapter accessories give the flexibility to convert Ethernet and power interfaces on the base unit into M12 interfaces while retaining all the certifications.	
Multipath operations†¢	Multipath operations (MPO) can enhance reliability by sending duplicate copies of packets across multiple wireless paths.	

Feature	Benefit
Workgroup bridge (WGB)	Provides wireless connectivity to a lightweight access point infrastructure on behalf of wired clients that are connected via Ethernet behind the WGB access point.

† Available with a future software upgrade.

¥ Available only in Wi-Fi mode.

¢ Available only in Cisco URWB mode.

* 6 GHz subject to approval by country's regulatory agency.

Prominent features

Get reliable wireless connectivity for your mission-critical applications

As you automate your processes and operations to increase safety and productivity, you also need to improve your situational awareness to control your systems. Moving assets involved in mission-critical applications, such as automated guided vehicles (AGVs), autonomous mobile robots (AMRs), and teleremote devices, require reliable wireless connectivity. And sometimes you need to extend your network where running fiber isn't feasible or is too costly.

The Catalyst IW9167 Series gives you flexibility and reliability so you can extend reliable wireless connectivity to more places and applications, with features such as:

- **One hardware device, three different technologies:** Protect your investment and evolve your wireless networks without the added cost of purchasing a new device. Simply update the software to run Wi-Fi 6, WGB, or Cisco URWB.
- **Multipath operations (MPO):**[1] Patented technology that duplicates your high-priority traffic and works alongside hardware failures to increase availability, lower latency, and lower the effects of interference and hardware failures.
- **Workgroup bridge (WGB):** In workgroup bridge mode, the device associates to another access point as a client and provides a network connection for the equipment connected to its Ethernet port.
- **Heavy-duty design:** IP67-rated, hardened to withstand shock, vibration, and extreme temperatures. Supports industrial protocols and industrial certifications (e.g., the EN 50155 rail standard on the IW9167E).

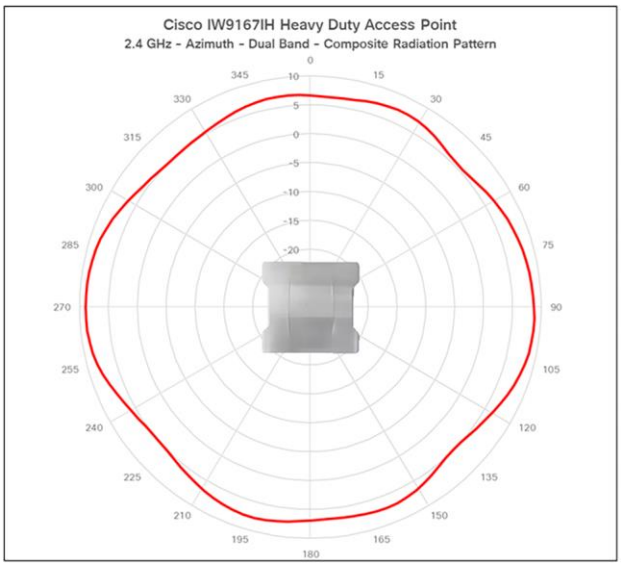
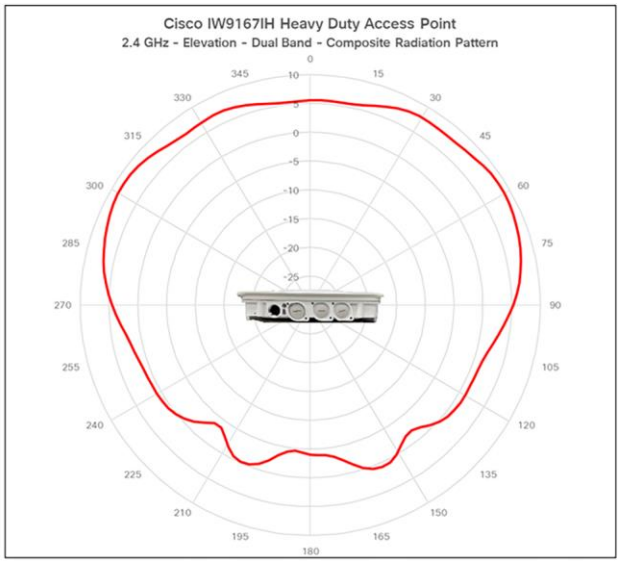
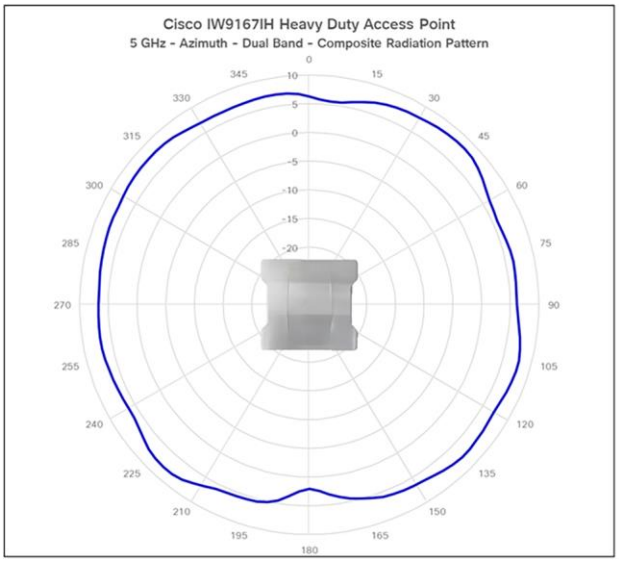
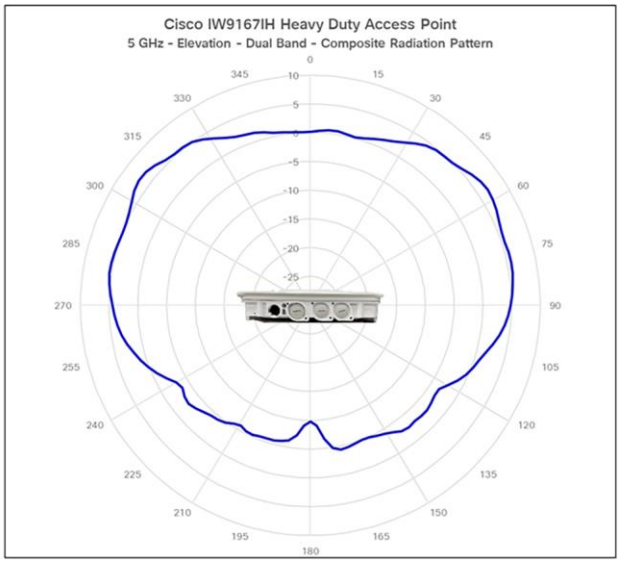
*6 GHz usage subject to approvals by country's regulatory agency.

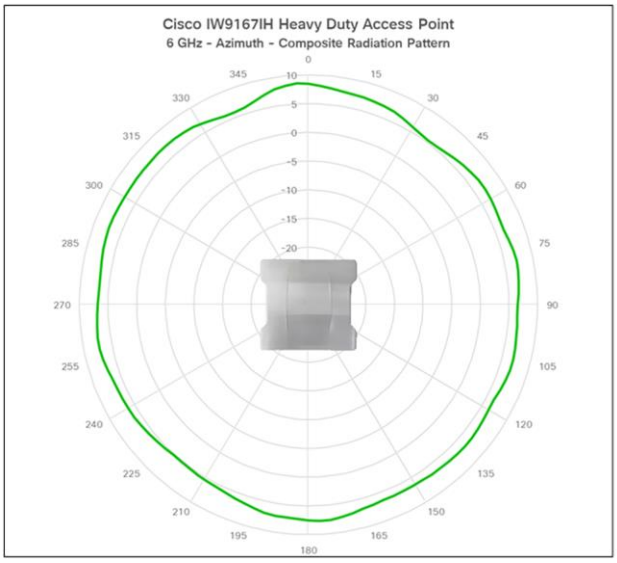
IW9167I antenna patterns

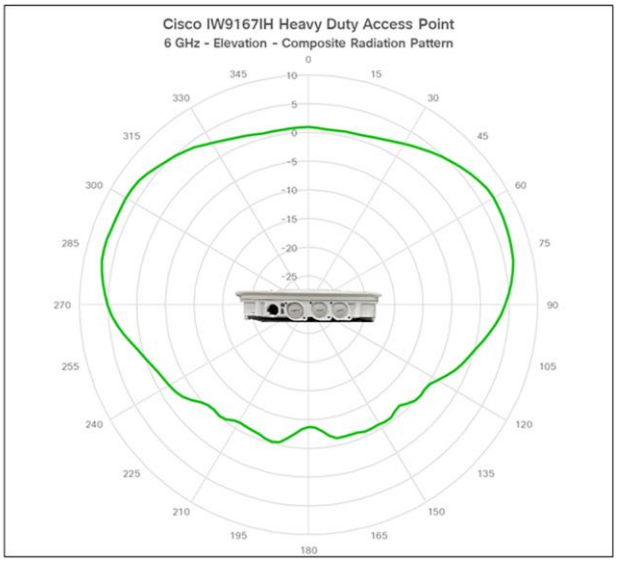


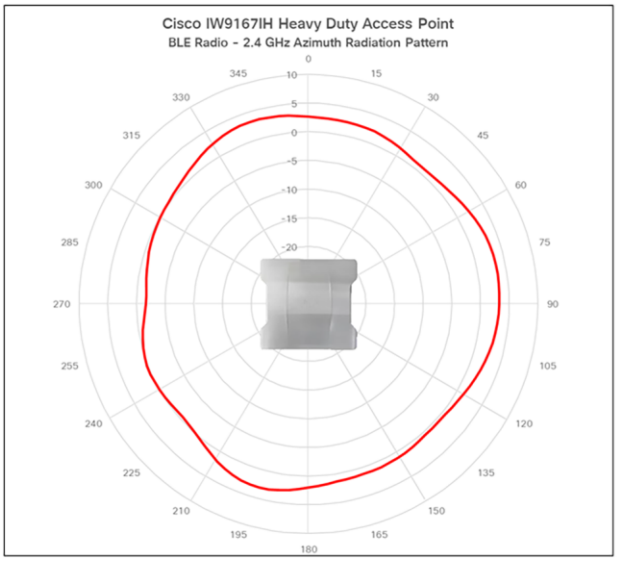


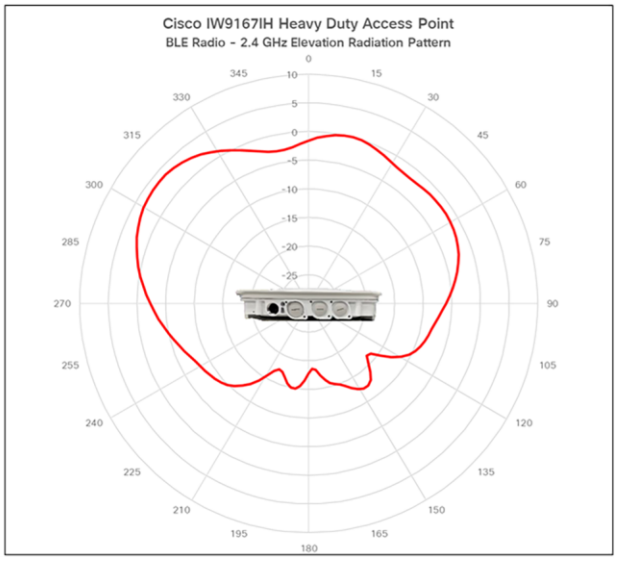


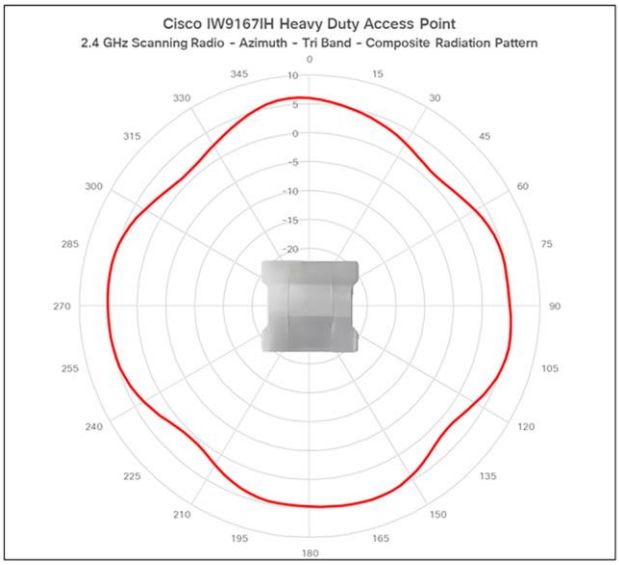


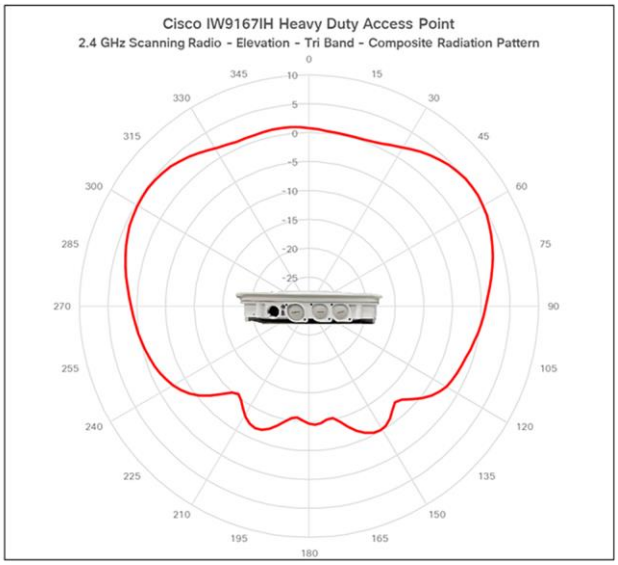


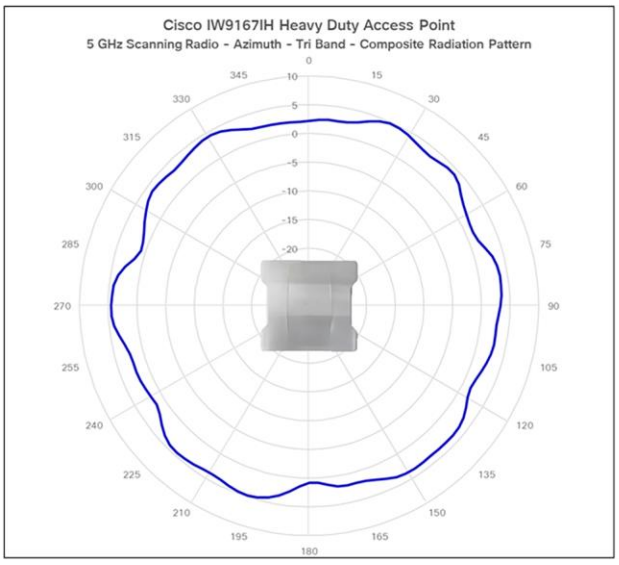


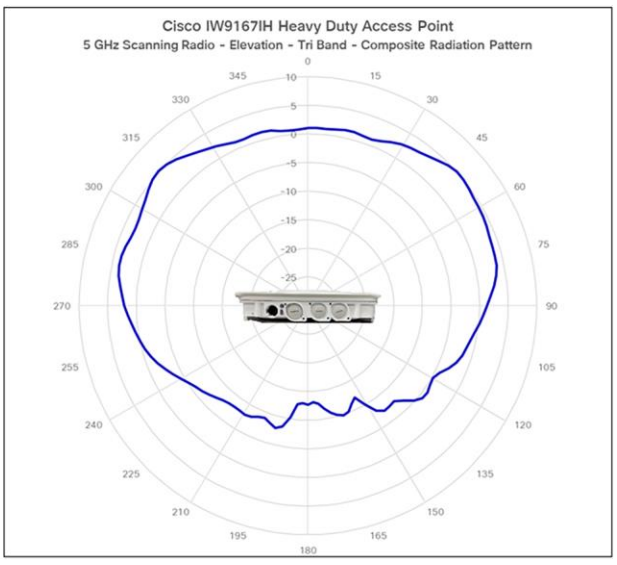


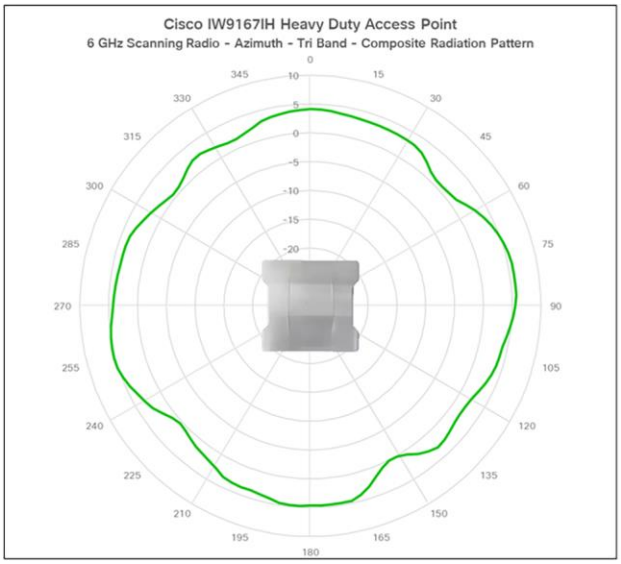


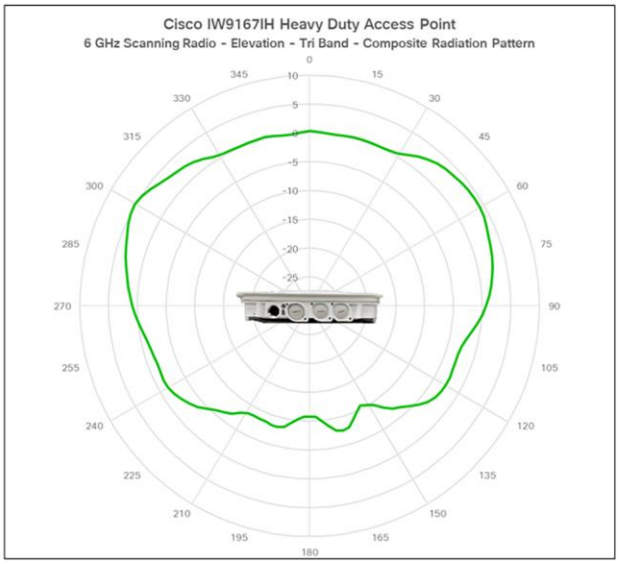












Ordering information

Table 6. Ordering information

Part #	Product description
IW9167EH-x-AP	Industrial Wireless 9167E, 11ax 6E AP, 8 RF ports, x domain, Wi-Fi software
IW9167EH-x-URWB	Industrial Wireless 9167E, 11ax 6E AP, 8 RF ports, x domain, URWB software
IW9167EH-x-WGB	Industrial Wireless 9167E, 11ax 6E AP, 8 RF ports, x domain, WGB software
IW9167IH-x-AP	Industrial Wireless 9167I, 11ax 6E AP, internal antenna, x domain, Wi-Fi software

x = regulatory domain

Warranty information

The Catalyst IW9167 Series comes with a 1-year limited warranty. The warranty includes 10-day advance hardware replacement and ensures that software media are defect-free for 90 days. For more details, visit Product Warranties.

Cisco and partner services

Realize the full business value of your technology investments faster with intelligent, customized services from Cisco and our partners. Backed by deep networking expertise and a broad ecosystem of partners, Cisco Services enable you to deploy a sound, scalable mobility network that enables rich media collaboration while improving the operational efficiency gained from a converged wired and wireless network infrastructure. Together with our partners, we offer expert plan, build, and run services to accelerate your transition to advanced mobility services while continuously optimizing the performance, reliability, and security of that architecture after it is deployed. For more details, visit Services for Wireless.

Smart Account

Creating a Smart Account by using the Cisco Smart Software Manager (SSM) enables you to order devices and licensing packages and also manage your software licenses from a centralized website. For more information on Smart Accounts, refer to https://www.cisco.com/go/smartaccounts.

Cisco Capital

Flexible payment solutions to help you achieve your objectives

Cisco Capital® makes it easier to get the right technology to achieve your objectives, enable business transformation and help you stay competitive. We can help you reduce the total cost of ownership, conserve capital, and accelerate growth. In more than 100 countries, our flexible payment solutions can help you acquire hardware, software, services, and complementary third-party equipment in easy, predictable payments. Learn more.

Get reliable wireless connectivity for any application, anywhere

Need to connect your mission-critical time-sensitive applications wirelessly with more bandwidth, higher reliability, and seamless handoffs? Take advantage of the 6 GHz band expansion and the flexibility to run one of two wireless technologies (Wi-Fi 6 or Cisco URWB) in a state-of-the-art hardware platform with the Cisco Catalyst IW9167 Series.
